

EOG

Enhanced Oxidation Generator

The Enhanced Oxidation Generator (EOG) is easy to install and leverages the power of natural ozone technology to improve water quality without the use of harmful chemicals. With minimal maintenance costs, the EOG helps to keep the Clack® filter control head clean, extending filter life and saving you money.

EASY TO INSTALL AND BUILT TO LAST

With just a few steps, the compact EOG mounts directly onto the Clack® control valve. The system includes the patented stainless steel Ozotech CD cell and features an all-weather enclosure.

IMPROVES QUALITY OF WATER

Ozone is proven to destroy microorganisms and remove minerals such as iron and magnesium instantly and effectively without harmful residue. The system will also assist in eliminating unwanted odors such as rotten egg, stale, or musty smells.

LOW MAINTENANCE

With no chemicals or pumps to maintain, the EOG requires very little maintenance. The system is also energy efficient drawing only milliamps per day. A cleaning kit and instructional video are available upon request.

NO HARMFUL CHEMICALS

Ozone has been proven to kill bacteria faster than chlorine, eliminating the need for traditional chemicals such as hydrogen peroxide or chlorine typically used to disinfect water. The EOG is safe for the environment including septic systems.

PROVEN TECHNOLOGY

With more than 30 years developing and manufacturing ozone technology, Ozotech products are safe, reliable and proven. The EOG has been tested by Clack® to be compatible with their ozone resistant control valve.

The EOG mounts directly onto the approved Clack® ozone resistant control valve. Contact your Clack® distributor for more information.
