

Salt Sensor®

Never Run Out of Water Softener Salt Again!

Salt Level Detection Monitor for Water Softener Systems

Salt Sensor® is an accurate and convenient way owners are notified when their water softener salt is low or out. The unit is a simple and affordable way for you to continue servicing your customers through repeat salt purchases, promotions, and other service opportunities.

The Salt Sensor® measures for the presence of salt in a water softener system and is installed on the outside of the brine tank, totally free of the salt environment, avoiding any corrosion to the unit. Once the salt level is below the unit, Salt Sensor will alert the owner it's time to add salt to avoid the damaging effects of hard water.

Dealer Benefits:

Continue customer connection:

- Efficient salt routes
- Dealer promotions
- Detects equipment malfunctions

Creates better value/benefit to customers

Use with salt subscription service

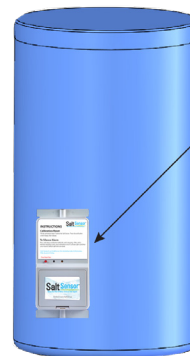

Allows for exceptional service

Operation Highlights

- For pre-fill systems with grid plates
- Easily attaches to the side of any salt tank
- Senses presence of salt through the wall of the tank
- No holes to drill or tank modifications needed
- Unit is outside of the brine tank so there's no corrosion
- Long battery life, up to three years
- Detects all types of salts used in water softener systems
